Master thesis
Effects of music listening on stress and skin barrier recovery

Music & Health Lab

Project aim
Study the effects of listening to relaxing music on stress and the speed of skin barrier recovery after a tape stripping procedure

Research methods
Lab music listening paradigm, questionnaires, tape stripping paradigm, transepidermal water loss (TEWL) measurements

What we offer
- Opportunity to learn about experimental design & data analysis
- Gaining expertise in using physiological measurements (TEWL)
- Being part of an exciting research project on the interface between mind and body

What we need from you
- High motivation to be an important player in the project (participant recruitment, testing, time management, data analysis)
- Excellent German and English language skills
- Willingness to write the thesis in English

Project start: January 2019
Supervision: Dr. Jasminka Majdandžić and Prof. Urs Nater
Interested? Send a CV & motivation letter to jasminka.majdandzic@univie.ac.at
Application deadline: 30.11.2018
