

# Calling for Master students!

Research topic: Effects of music listening on pain and stress in humans

Music & Health Lab

## Project aim

Study the long-term effects of listening to different kinds of musical interventions on pain tolerance and biological and subjective stress levels in humans.

## Research methods

Lab music listening paradigm, cold pressor test (pain induction technique), physiological data collection (electrodermal activity and heart rate), hair cortisol analysis, questionnaires.

## What we offer

- Opportunity to learn about a musical experimental design
- Gaining expertise collecting and analyzing physiological and behavioral data
- Being part of an exciting research project on the interface between mind and body!

## What we need from you

- High motivation to be an important player in the project (participant recruitment, testing, time management, data analysis)
- Excellent German and English language skills
- Willingness to write the thesis in English

Supervision: Prof. Urs Nater
